Synopsis

Table of Contents

- 1 Basis for the Analysis
- 2 Full-scale display, 40-fold enlargement
- 3 Half-scale display, 100-fold enlargement
- 4 Large-scale display, 400-fold enlargement
- 5 Comparison with the neutral sample
- 6 Chemical Parameters
- 7 Changes caused by VitaJuwel
- 8 Summary

1. Basis for the analysis

„Two samples were examined for this test:

the neutral sample of the Überlingen tap water and a sample of the Überlingen tap water treated with the instrument of the company VitaJuwel.

Both samples were tested in accordance with the examination methods specified in our book “Instruments for water vitalization.”

„The examined instrument belongs to the category of energetic water preparation instruments. The active substances are mainly semi-precious stones.

The sensory examination was no cause for complaint. The sample was odorless, clear, neutral in taste, and without any distinctive features. After the treatment, a distinctive change in crystal structure took place when compared to the base sample.“

„Overall, a distinct effectiveness of the water treatment instruments of the company VitaJuwel is shown, which resulted in the noticeable improvement of the tap water quality of the city of Überlingen.“

2. Full-scale display, 40-fold enlargement

„In the full-scale display, very regular crystal structures are displayed.

A strong approximation to the 60 degree angle, as is only found in high quality spring water, is clearly displayed.

90° degree angle structures are hardly appearing in this crystallization, so it can be assumed that the harmful substances, which were present in the neutral sample, could be neutralized to a large extent.

The energy level of this sample was distinctly raised. A clearly positive energy balance can be assumed.“

„The consumer will experience more vitalized and stimulated metabolism if enjoying water samples after treatment with the instruments of the company VitaJuwel.“

3. Half-scale display, 100-fold enlargement

„In the half-scale display, plant-like crystal structures, which were not found as such in the neutral sample at all, are displayed.

Increasingly, 60° degree angle structures are appearing, which dominate the whole picture. This is a clear indication for the strong quality improvement through the water treatment instrument, because such structures only appear in very high quality water of natural origin. Insofar, a renaturation of the tap water took place.

No indication of 90 degree angle structures is given, which would portray pollutants or harmful substances. To the contrary, it can be determined that the bioavailability and the biological quality is definitely increased.“

„The water preparation instrument of the company VitaJuwel not only is able to neutralize negative effects, but is also able to restructure water so it obtains essentially natural, positive characteristics.“

4. Large-scale display, 400-fold enlargement

„The large-scale display shows a very well formed branch-like crystal complex, that exhibits further fine branching plant-like structures, which were not present in the neutral sample.

A strong approximation to a 60° degree angle formation is a sign of the vitalizing effect onto the water, which also results in a clear convergence of the water sample towards natural spring water.

This demonstrates that the water treatment instrument of the company VitaJuwel caused a definite increase in quality of the water sample.“

„Accordingly, the energy balance is respectively more positive than the one of the neutral sample, which is reflected accordingly in the end results.“

5. Comparison with neutral sample

Sample: neutral

Sample: VitaJuwel

„The treatment with the instrument of the company VitaJuwel resulted in very clear quality improvements in both biological as well as technical regard.

For this reason, the sample is reaching a quality level otherwise only found in natural spring water. Compared to the neutral sample or to other comparable tap waters a significant quality increase was measured.

We evaluate the sample with the grade of 1.9 and the evaluation of good to excellent (on a scale of 1 to 6, with 1 = excellent and 6 = unsatisfactory).

When using the water treatment instrument, a very distinct advantage is demonstrated for the consumer.“

6. Chemical Parameters

„The increase towards basicity shows a clear improvement of the sample. The increase of the oxygen content and the reduction in conductometry result in a qualitative improvement in comparison to the neutral sample.“

7. Changes caused by VitaJuwel

- „distinct improvement of tap water quality
- neutralization of harmful substances
- improvement of the pH-value and oxygen content
- increase in bioavailability of minerals
- raise of energy balance
- increase of vital powers
- enhancement of the solvability of minerals
- better supply of trace elements and minerals
- good approach to natural spring water quality
- high biological valance“

8. Summary

- „Positive stimulation and support of the human metabolism through the high bioavailability of the trace elements and the energy surplus.“
- „Improvement of the technical water quality, reduction of danger of calcification, resulting in the increase of life expectancy and savings in the maintenance of technical equipment.“
- „Renaturation of tap water is taking place, increasing the quality significantly and approaching spring water level quality.“

A stylized, light brown plant logo with several long, curved leaves and a central stem with three small circular nodes. The plant is positioned in the background, centered horizontally.
